

(A)

Blinded expert evaluation of item quality

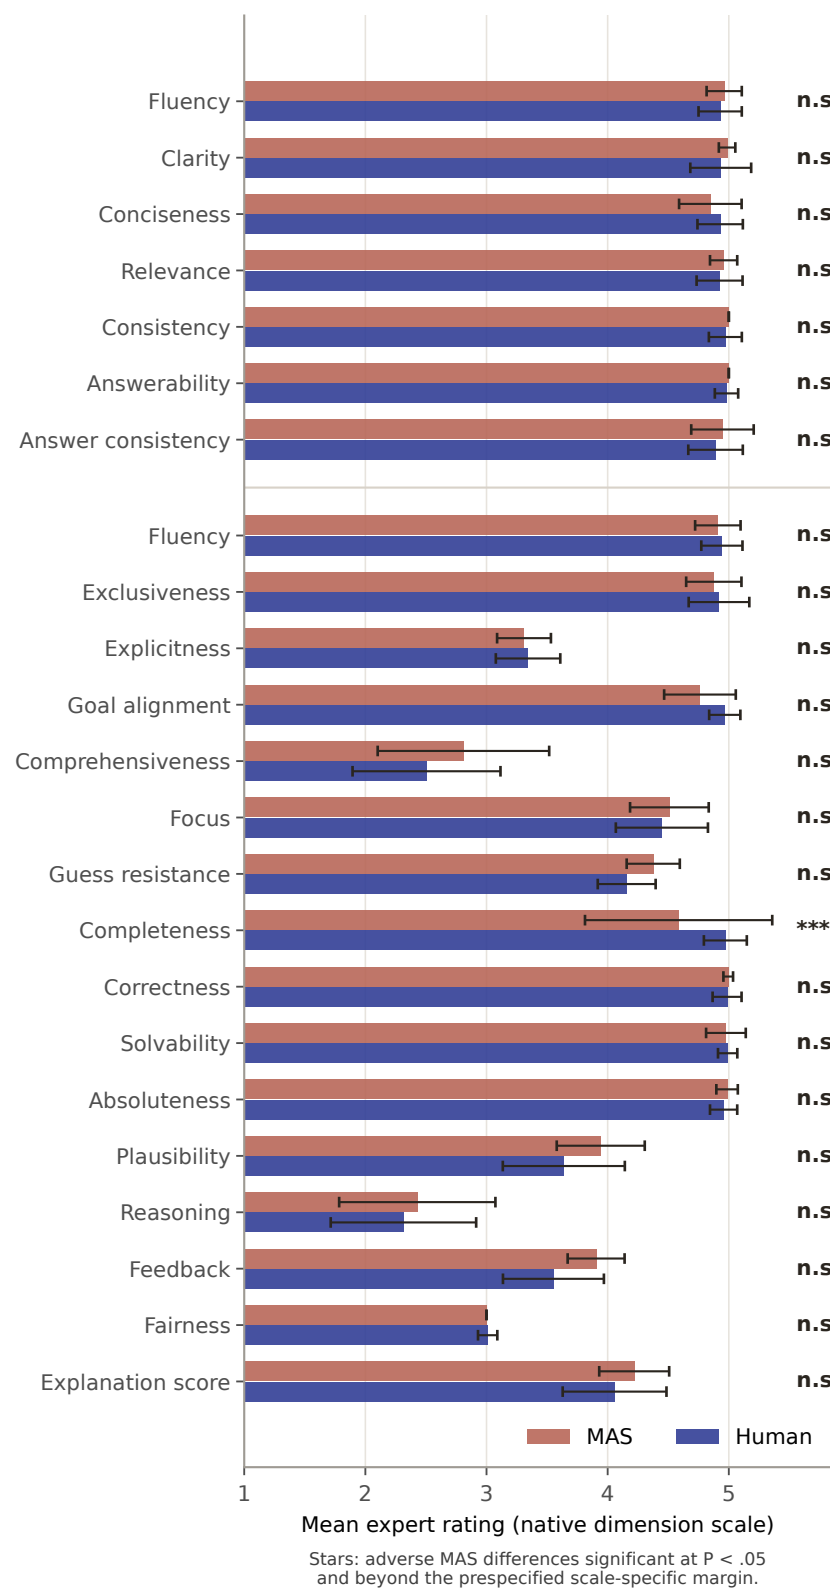

(B)

Primary endpoint non-inferiority

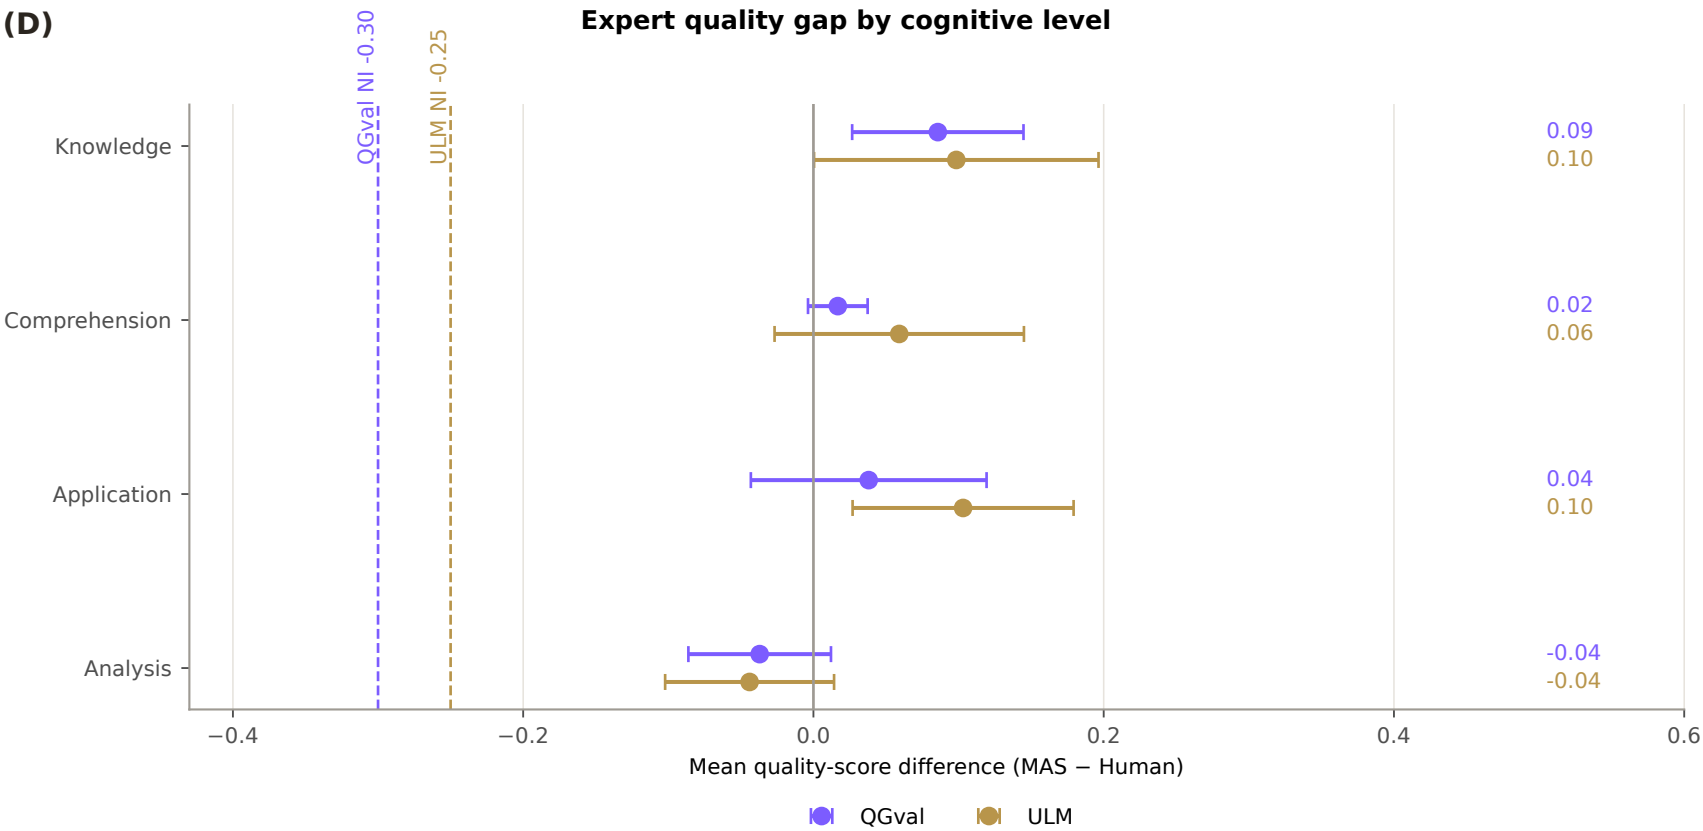

(C)

Per-dimension human-expert scores

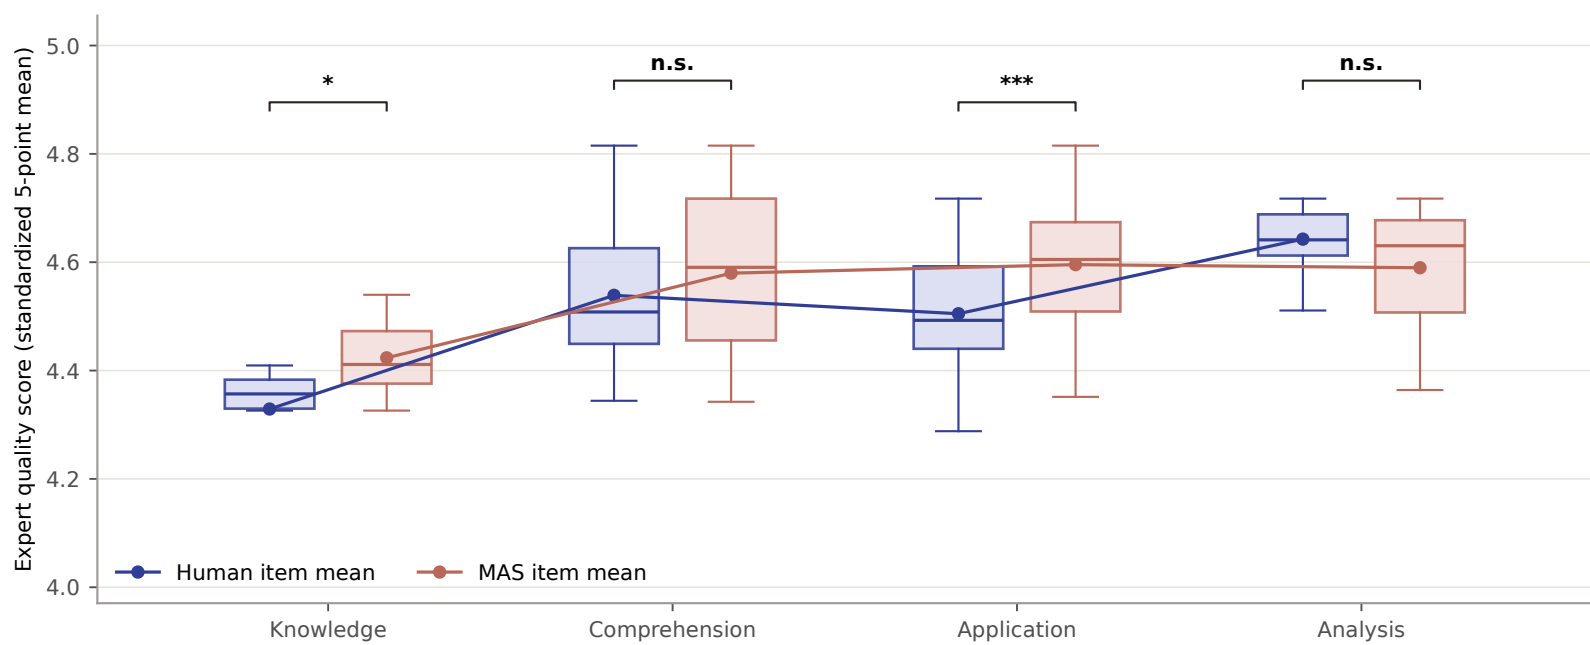

(D)

Expert quality gap by cognitive level

(E)

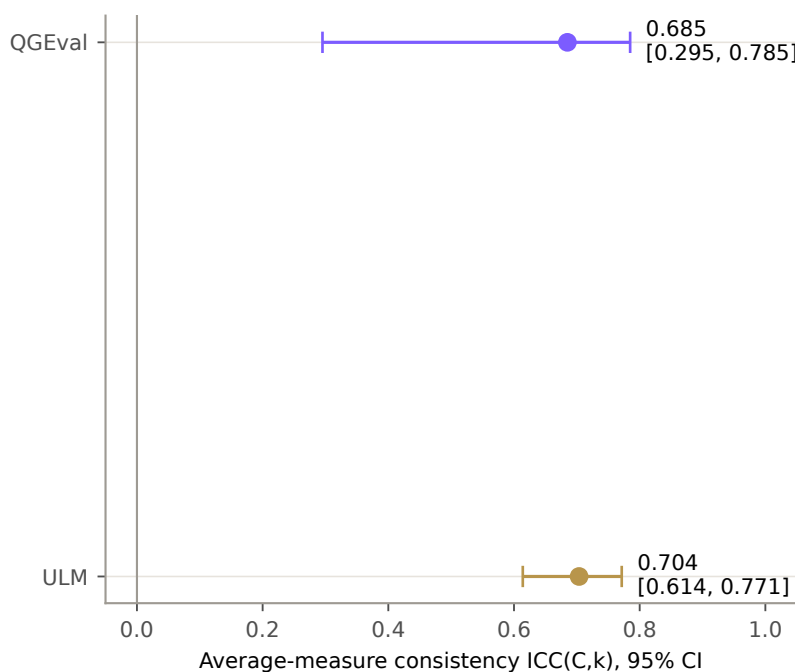

Expert quality by source and cognitive level

Mixed model: source x cognitive level + rating order, with crossed random rater and item intercepts; stars show adjusted source contrasts.

(F)

Expert inter-rater reliability

Two-way random consistency ICC; k=3 experts. Points show ICC(C,k).
